# MEGAN SILVEY

---

---

My name is Megan Silvey, and I started school at the University of Kansas in the fall of 2016. I am working towards a Bachelor of Science in Mathematics, and attaining a minor in psychology. I have always had a passion for mathematics, and I greatly enjoy learning new techniques to solve problems. This has been evident in my involvement in mathematics clubs and competitions over the past nine years. I hope as Undergraduate Vice President of the Association for Women in Mathematics chapter at the University of Kansas that I can help others see mathematics as entertaining and useful as I do, and I hope to help both men and women achieve their own goals in mathematics and other STEM areas.
